# CoilPaq

...the coil coating temperature profiling solution

**The DataPaq® CoilPaq system is used in surface coating lines to monitor the temperature profile of the coil strip at various points across its width, as it is fed through the oven.**

The design of the CoilPaq allows you to place this instrument on the moving coil without stopping the line.

Precise temperature readings begin when the start button is pushed or user-determined time or temperature triggers are reached.

Readings are taken as frequently as every 0.05 seconds for the best possible resolution.

When the run is complete, the data is downloaded onto powerful Datapaq Insight™ software. Fast and accurate analysis of the curing cycle with full documentation is generated in seconds.

## SYSTEM FEATURES

- Six measurement points (3 air, 3 surface)
- Proven on coil coating lines running at over 183m (600ft) per minute
- Sampling intervals from 0.05 seconds to 10 minutes
- Data logger accuracy of  $\pm 0.5^{\circ}\text{C}$  ( $\pm 0.9^{\circ}\text{F}$ )
- Range of arm sizes to suit all coil widths
- Works on both aluminum and steel
- Starts automatically upon entering the oven (temperature trigger)
- Light and compact
- Easy grab handle
- Coil edge guide rails (optional)

## SYSTEM BENEFITS

- Monitors the product coating cure and checks that it is to the manufacturer's specification
- Confirms uniform temperature across the entire width of the coil strip
- Find and prevent problems due to improper coil temperatures; thus minimizing rejects and production downtime
- Surface and air thermocouples are positioned in the center and sides of the coil to measure uniformity across the strip
- Allows fast set-up after line maintenance, breakdown or coil/coating change
- No need to stop or slow the line; the CoilPaq is placed on the moving coil
- Complete documentation is automatically generated for ISO9000
